Air Pumps for Commercial Applications & Hydrogen Pumps for Fuel Cells

“What You Need in a Clutch®”
Superchargers

Ogura blowers provide robust long life and dependable operation in the most challenging applications. Ogura purchased the unique supercharger design from Wankel in Germany in 1973, but it has been improved to meet the demanding, high efficiency requirements of many of today’s applications. Ranging in size from just under 6 m^3/hr (TX002) to over 1212 m^3/hr (TX28), Ogura’s positive displacement blower can handle applications from air to the universe’s lightest gas: Hydrogen.

When efficiency counts, Ogura delivers. Ogura’s design is one of the most efficient positive displacement pumps in the industry. These pumps can help make your next generation machine smaller, lighter and more powerful.

Hollow, aircraft grade aluminum rotors are coated with a special lightweight sealing material. This unique low inertia design helps provide the fastest response time for this type of blower.
Supercharger options:
- Direct drive to couple electric motors or drive shafts
- Poly V belt with (on/off) electromagnetic clutch
- Other standard pulley options available

Pumps can be configured to handle:
- Nitrogen (Air)
- Hydrogen (H2)
- Ionized water (100% RH)

Hollow core, low inertia aluminum rotors
Special rotor coating to absorb wear particles and avoid scoring
Components are made to withstand corrosive gases
Modified long life seal for hydrogen
Unique pressure cavity construction to prevent hydrogen contamination
Multiple sizes available to match application requirements
Wide Temperature Range

Applications include:
- Fuel cells (for air and H2)
- Automotive supercharging
- DPF, emissions burn control
- Agriculture
- Inflation devices
- Blowoff equipment

General Specifications:
- Speeds to 15,000 RPM
- Air flows from 3 to 714 CFM
- Efficiencies to 67% in most applications.
Ogura has over 7,000 Standard and Custom Electromagnetic Clutch and Brake Designs.

Founded in 1938, Ogura has over 80 years’ experience in the manufacture and design of clutches and brakes. Ogura is currently the world’s largest manufacturer of electromagnetic clutches and brakes producing around 30 million units per year with over 7,000 standard and custom designs available from 14 manufacturing ISO certified facilities throughout the world.
